Soft Skills

Personal Accountability

Critical Thinking

Problem Solving

Time Management

Open-mindedness

Self-motivation

Obsessively passionate programmer with an insatiable appetite for learning and continued improvement. Self-taught programmer with 3 years of web development education, and more than 5 years of personal experience in software development techniques and practices.

EXPERIENCE

01/018 – Current

University of Arizona

Teaching Assistant – Coding Boot Camp

- Regularly use time-management, leadership, and communication skills in a web development environment.
- Work with the instructor to implement lessons following the school's curriculum, goals, objectives, and philosophies.
- Supported colleagues in implementing an appropriate plan for a struggling student.
- Consistently engage students during in-class activities to encourage social, emotional, and intellectual conversations and ideas.
- Tutor students individually to reinforce learning concepts.

11/2017 – Current

Trilogy Education Services

Senior Tutor – Web Development

- More than 400 tutoring sessions with a score of 4.73 of 5 in all categories from student reviews.
- More than a web development tutor, I am a mentor to future Software Engineers in our industry.
- Help students begin thinking like programmers while guiding them to solutions with coding problems.
- Continuously improve development and communication skills in order to deliver the most value to my students.

PROJECTS

- Spitface Battles is a full-stack video platform for the underground hip-hop scene.
- Portfolio uses HTML, CSS, JavaScript, jQuery, and Bootstrap while maintaining my knowledge of best practices and coding conventions.
- Daves's Fave Flick Picks is a website that uses HTML, CSS, API and other web development technologies.
- Building the board game Battleship was challenging and rewarding. I learned my first scripting language from documentation and programmed the seemingly simple logic for the AI player.
- Several Windows applications using Visual Studio and Visual Basic. These projects are titled Paycheck Calculator, Artist Name Extractor, and Duplicate File Finder.

EDUCATION

As previously mentioned, I am a self-taught programmer and web developer and therefore lack any formal education, certificates, or degrees. However, I was able to learn my first programming languages from documentation and without the internet. I feel like my ability to self-teach, my constant pursuit of improvement through learning, and the items below offset my lack of a formal education.

- More than 5 years of self-teaching, problem solving, critical thinking, practice, and studying of software development techniques and practices.
- Completed assignments from a full stack web development curriculum approved by the University of Arizona.
- Programming Foundations course that solidified my understanding of object-oriented programming while using a new programming language.
- Android fundamentals course that built a weather app. I also built an app that sent notifications between users.
